# Wireless 802.11b Access Point

## **Quick Install Guide**

M73-APO007-540

#### Hardware Installation

Note: Before you starting hardware connection, you are advised to find a appropriate location to place the Access Point. Usually, the best place for the Access Point is at the center of your wireless network, with line of straight to all your wireless stations. Also, remember to adjust the antenna; usually the higher the antenna is placed, the better will be the performance.

- Step 1. Connect to your local area network: connect a Ethernet cable to one of the Ethernet port (LAN1 or LAN2) of this Wireless Access Point, and the other end to a hub, switch, router, or another wireless access point.
- Step 2. Power on the device: connect the included AC power adapter to the Wireless Access Point's power port and the other end to a wall outlet.

#### Check the LEDs:

- The *Power* and *LAN* # LEDs should be ON. LAN# LED will even blink if there is traffic.
- The *Link/Act* LED will blink if no client station is being associated to this Wireless Access Point.

• If the *ErrStatus* LED glows, it means this Wireless Access Point fails on self test. Please ask your dealer for technical support.

#### Step 3. Configure your PC.

Make sure your local PC(s) has wireless network adapter installed.

#### Check the LED:

• The Link/Act LED should be ON in static when your PC associates to this Wireless Access Point.

In order to use the Access Point, other Wireless devices must use **the same SSID and WEP settings** as the Wireless Access Point.

The Wireless Access Point's default settings are as follows.

Setting	Wireless Access P int
Device Name	Wireless AP
SSID	Default value: 802_11b_SSID
Channel	11
WEP	Default value: <b>Disabled</b>
IP Address	192.168.100.252

#### Table-1 Wireless Access Point's default settings

### **Manual Configuration**

- 1. Start your computer. Connect an Ethernet cable between your computer and the Wireless Access Point.
- 2. Make sure your wired station is set to the same subnet mask as the Wireless Access Point, i.e. 192.168.100.12.
- 3. Start your WEB browser. In the *Address* box, enter the following:

#### HTTP://192.168.100.252

The main menu appears. Please refer to the user manual saved in the CD-ROM for detail.
